Functions

Artificial Intelligence
In the field of physical security, Ecovision Artificial Intelligence analytics uses powerful algorithms to automate detection, categorization, and analysis of objects and motions in a camera's view. It reduces costs, speeds up responses, and facilitates new practices and processes.

Smart Dual Light
Smart Dual light technology adopts smart algorithm to accurately detect objects. The IR illuminator is normally on at night. When the object is detected by the camera, the warm light turns on and the camera records the full-color video and information of key events. When the objects is out of the monitored area, the warm light turns off and the IR illuminator turns back on, which helps reduce light pollution.

Humanoid Detection
Advanced algorithms are used to differentiate and send an alarm when human and vehicular shapes are detected. False alerts are filtered for up to 95% accuracy, saving customers the hassle of unwanted alarms. Video clips recorded with Motion Detection enabled cameras get sorted into "Files". Making it easy to play back, review and retrieve historical information. Motion Detection alerts can be viewed on the Mobile app for iOS and Android.

Perimeter Protection
Perimeter security is a term that represents a broad range of physical security options such as access control, gates, barriers and other security controls, a camera with video analytics protect the perimeter in a reliable and cost-effective manner.

Smart H.265+
With H.265+, video quality nearly matches that of H.265/HEVC but reduces the transmission bandwidth and storage capacity required, due to three key technologies — prediction encoding, noise suppression, and flexible bitrate control. It demonstrates incredible improvements in bandwidth reduction, data storage efficiency, and video content analyses.

Wide Dynamic Range (WDR)
With high-performance sensor and large aperture lens, Ecovision WDR technology improves a camera's image quality under high-contrast lighting conditions where both dimly and brightly lit areas are present in the field of view. It enables the camera to capture details clearly in both the poorly and strongly illuminated areas of the video.

Two Way Audio
Elevate your security measures with our cutting-edge Two-Way Audio CCTV. The two-way audio feature adds an extra layer of interactivity and functionality to CCTV cameras, enabling users to not only see but also hear and communicate with events or individuals at the camera's location in real time. the remote user can transmit their voice to the camera location through the speaker.

Protection (IP62, Wide Voltage)
IP62: The camera passes a series of strict test on dust and soak.
Wide voltage: The camera allows ±30% (for some power supplies) input voltage tolerance (wide voltage range), and it is widely applied to outdoor environment with instable voltage.
